## 2016 AB/BC 5

5. The inside of a funnel of height 10 inches has circular cross sections, as shown in the figure above. At height $h$, the radius of the funnel is given by $r=\frac{1}{20}\left(3+h^{2}\right)$, where $0 \leq h \leq 10$. The units of $r$ and $h$ are inches.
(c) The funnel contains liquid that is draining from the bottom. At the instant when the height of the liquid is $h=3$ inches, the radius of the surface of the liquid is decreasing at a rate of $\frac{1}{5}$ inch per second. At this instant, what is the rate of change of the height of the liquid with respect to time?

## 2017 AB 6

| $x$ | $g(x)$ | $g^{\prime}(x)$ |
| ---: | ---: | ---: |
| -5 | 10 | -3 |
| -4 | 5 | -1 |
| -3 | 2 | 4 |
| -2 | 3 | 1 |
| -1 | 1 | -2 |
| 0 | 0 | -3 |

6. Let $f$ be the function defined by $f(x)=\cos (2 x)+e^{\sin x}$.

Let $g$ be a differentiable function. The table above gives values of $g$ and its derivative $g^{\prime}$ at selected values of $x$. Let $h$ be the function whose graph, consisting of five line segments, is shown in the figure above.
(a) Find the slope of the line tangent to the graph of $f$ at $x=\pi$.
(b) Let $k$ be the function defined by $k(x)=h(f(x))$. Find $k^{\prime}(\pi)$.
(c)Let $m$ be the function defined by $m(x)=g(-2 x) \cdot h(x)$. Find $m^{\prime}(2)$.
